Travel Appointments at Wadhurst Medical Group

Appointments for Travel Assessments are only available at Belmont Surgery in Wadhurst

- We advise that you have an appointment at least 6-8 weeks prior to travel. If this is not possible, please be aware that you may not be able to have complete courses of some vaccinations.
- If you have a complicated medical history or complex travel plans then a longer time interval may be required before travel to ensure you have adequate time for all information and vaccines required.
- Please be aware that depending on your travel plans you may require multiple appointments prior to travel.
- Each person travelling requires a separate appointment.
- If you are a family with younger children travelling together, you may like to nominate a family member to discuss your travel plans initially before booking the rest of the family in.
- We will ask you to complete a travel risk assessment form for each traveller prior to any appointment and we may refuse appointments if these have not been completed.
- You will be given advice about current risks to the countries listed in your assessment form, discuss vaccinations required, and give vaccinations following appropriate schedules, and arrange any follow up appointment required.
- We can also advise on medication for malaria prevention and arrange private prescription if required.
